

Introduction

The TCAN is a pressure transducer designed to be a high performance and cost effective solution for the mobile industry where either a CAN-bus or J1939 interface is needed. With high overpressure and burst pressure, this sensor is designed to resist shock and vibration present in the mobile industry. Its single-piece design allows for a leak proof design since there are no seals and no welds.

Features

- CANopen and J1939 output signals
- Measuring ranges from 150 psi to 10000 psi
- Accuracy up to 0.25% FS
- Designed for OEM needs
- Overpressure of up to 300% FS and burst pressure of up to 500% FS

Markets

- Hydraulics and pneumatics
- Automation engineering
- Industrial engineering
- Mobile and industrial sensing
- Construction machinery
- Agricultural machinery
- Industrial trucks
- Cranes
